SUMMARY

Principal-level backend & platform engineer with 13 years of experience building scalable distributed systems and high-traffic backend infrastructure. Led the redesign of a critical API orchestration layer serving millions of daily requests, reducing p99 latency 5× and achieving 99.9% availability across 10+ teams. Built event pipelines, signal infrastructure, and experimentation frameworks that enabled data-driven product decisions at scale. Track record of defining technical direction, driving alignment across multiple departments, and delivering complex 0→1 systems from inception through production. Combines deep hands-on backend engineering with cross-organizational technical leadership.

LEADERSHIP HIGHLIGHTS

- Led cross-org backend platform modernization spanning 10+ engineering teams across 3 departments with measurable growth impact
- Defined technical roadmaps and architectural standards adopted org-wide via RFCs and design docs
- Built event pipelines, signal infrastructure, and experimentation frameworks enabling data-driven product launches and rollouts
- Mentored senior engineers toward Principal-level scope; drove cross-org technical alignment

Technologies: Java, Spring Boot, Python, Node.js · API Design, Event Pipelines, Service Orchestration, Feature Flags · AWS, Kubernetes, Docker, Kafka, Redis, PostgreSQL · GraphQL (Netflix DGS), Microservices, Event-Driven · Datadog, Grafana, Distributed Tracing

EXPERIENCE

CarGurus — Principal Software Engineer / Technical Lead

Oct 2019 – Present

High-Traffic Platform Modernization — Backend Infrastructure & Growth

- Led 3 principal/senior engineers and partnered with ~10 teams across 3 departments to redesign the core serving infrastructure behind CarGurus' most-visited page (~8,000 rpm, millions of daily impressions).
- Introduced a new orchestration service consolidating 12 downstream integrations into 5 well-defined services, reducing fan-out and simplifying failure modes. Produced initial architecture in ~2 weeks; shipped first milestone in 6 months.

  p99: 250 ms → 50 ms (5×) **Availability: 98% → 99.9%** **Deploy: 1 hr → 3 min** (20×)

Digital Commerce Platform & Experimentation

- Led backend design and launch of multiple new products using microservice and event-driven architecture; built signal infrastructure to capture user intent and drive data-driven product decisions.
- Enabled the company to quickly test, launch, and safely retire product experiments without destabilizing core systems — directly impacting user activation and retention metrics.

GraphQL Federation — Unified Serving Layer

- Designed and integrated a Netflix DGS subgraph into a federated GraphQL gateway, creating a unified serving layer for frontend, backend, and recommendation consumers from a single graph.
- Implemented schema federation, batch data loaders (N+1 prevention), and JVM warmup strategies; built load tests ensuring production-grade reliability.

Cross-Org Platform Leadership & Technical Direction

- Defined technical roadmap and architectural standards for platform services — API design, caching, distributed orchestration — adopted across multiple teams via RFCs and design docs.
- Mentored senior engineers on system design, performance, and path to Principal-level scope.

AI Integration — MCP Server & GenAI Platform

- Sole backend engineer for an MCP server on the OpenAI Apps SDK, exposing platform capabilities as tools callable by AI agents. Separately built a GenAI automation platform with multi-provider LLM orchestration and evaluation harness.

Applause — Senior Software Engineer / Technical Lead

Oct 2017 – Oct 2019

Authentication & Identity Platform

- Upgraded legacy authentication to a modern Keycloak-based SSO platform, unifying auth across internal systems, an enterprise partner platform, and a large external community. Migrated multiple Angular, Node.js, and Java monoliths behind the new auth gateway with minimal downtime.

Event Sourcing & CQRS Platform Initiative

- Drove design and prototyping of a microservice architecture based on event sourcing and CQRS; defined foundational patterns for services, events, and read/write models adopted by new domains.

Cross-Org Collaboration

- Partnered with product, support, and customer-facing teams to modernize internal workflows and enterprise integrations with clear observability and rollback paths.

Toast Inc. — **Senior Software Engineer** Sep 2014 – Oct 2017

Monolith → Microservices Decomposition

- Among the earliest engineers during hypergrowth; designed and implemented core backend services (Order Service, Labor Service, foundational APIs) that became the basis for future platform growth.
- Built initial AWS deployment pipelines and automated testing framework, enabling safer releases during rapid product expansion.

Third-Party Integrations & Cross-Functional Leadership

- Led integrations with key partners, ensuring reliable bidirectional sync and schema evolution. Partnered with PMs, sales, and support to translate customer feedback into platform capabilities.

The MathWorks Inc. — **Software Engineer II** Jul 2013 – Aug 2014

Developed internal engineering tools for MATLAB/Simulink workflows. Improved backend automation systems for build/test reliability and developer productivity.

EDUCATION

M.S. in Electrical and Computer Engineering — Northeastern University, Boston 2010 – 2013

B.S. in Information Science — Beijing University of Aeronautics and Astronautics 2006 – 2010
