Circle Hiring Team
Distinguished Software Engineer

Dear Circle Hiring Team,

With USDC, Circle Payments Network, and Arc, Circle is building the financial infrastructure layer for the internet — and the Distinguished Engineer role is the kind of org-wide technical leadership I want to do next. I've spent 13 years building the pattern this role requires: setting long-term technical direction, stewarding core platform architectures, and raising the engineering bar across entire organizations.

At CarGurus, I drove architectural direction across 10+ teams and 3 departments through a structured RFC process, built shared platform services and orchestration layers that multiple teams depend on, and mentored senior engineers to Principal-level scope. I've also led an authentication modernization in a compliance-sensitive environment with contractual SLAs and minimal downtime — the kind of reliability and security rigor that financial infrastructure demands. My systems consistently run at 99.9% availability.

What draws me to Circle specifically is the combination of regulated financial systems, multi-chain blockchain infrastructure, and the need for someone who can influence technical direction company-wide — not just within a single team. That's the scope I operate at today, and I'd welcome the chance to bring it to Circle's platform as it scales through its next chapter as a public company.

Sincerely,

Yifei Sun
